## CARY AUDIO DESIGN INTRODUCES THE NEW CINEMA 12 SURROUND SOUND PROCESSOR

APEX, NC (April, 2011)  
Following the great success of its award winning Cinema 11a processor, Cary Audio Design is proud to present the next step in the future of audio and technology.

The Cinema 12 is a full-featured preamplifier processor, sharing many of the same features as its predecessor while increasing the performance and flexibility. The Cinema 12 increases its video connections to include four HDMI v1.4a inputs, supporting most 3D formats, 48-bit Deep Color, audio return channel, Ethernet channel, and CEC power on/off features. It also maintains a full suite of audio connections in all formats, as well as discrete RS-232 and IR command codes for simple operation and a 12VDC trigger to control on/off switching of a power amp or other component. To increase audio performance even beyond that of the Cinema 11a, the Cinema 12 offers the very latest Burr Brown 32 bit/192 kHz surround DAC chipsets for the most impressive surround separation and steering, and the most accurate audio, as befits the 22 year heritage of Cary Audio Design as an audiophile music company. All circuitry in the processor is fully differential-balanced to take advantage of the improved noise reduction and increased processing power. All of the latest HD surround formats are supported, to go along with the newest HDMI switching. The Cinema 12 includes a new full-function, programmable universal remote control with extensive macro capabilities. The Cinema 12 is available with either a black or silver brushed aluminum faceplate.

The new Cary Audio Design Cinema 12 will ship April, 2011.

Weight: 25 lbs  
Dimensions: 17.7"W x 4.5" H x 16.5"D  
Retail Price: \$4,995
